GAIN Report Number: AG8004

Algeria Grain and Feed Annual 2008

Approved by:

Michael FAY U.S. Embassy, Algiers

Prepared by:

Nabila Hales

Report Highlights:

Should weather conditions hold, the 2008 Algerian grain crop will match the previous year's level. Facing high import prices for grains, the Government of Algeria will continue to subsidies food prices and increase prices paid to farmers in hope of stimulating domestic grain production.

Includes PSD Changes: Yes Includes Trade Matrix: Yes Annual Report Algiers [AG1] [AG]

SECTION I. SITUATION AND OUTLOOK

Planting season took place under largely satisfactory conditions. Rains were heavy in some regions during the last two months of 2007, and resulted in significant and sometimes deadly floods. But, these rains generally alleviated considerable concerns about dry conditions.

Crops throughout the country are developing well. Durum plantings continue to account for the biggest portion of the planted area, followed by barley and bread wheat.

The first quarter of 2008 was rainy through out Algeria and snowy in some regions. Rain continued in April, which should help in good crop production. Should good conditions continue, 2008 crop has potential to be as good as or better than the 2007, which produced 4.3 million tons total cereals.

However, production levels still don't meet domestic demand for cereals (6 million MT). The average production level for 2000-2004 was 2.7 million MT and the maximum level reached for the best years was 4 million MT. Harvests as well as production have been plagued by either drought or poor weather. GOA decided recently to boost domestic wheat crop on the downstream side. According to Minister of Agriculture, the government will offer higher prices for wheat farmers for the upcoming season to buy domestic crops.

Starting from 2008 wheat harvest, GOA will buy local wheat crops from farmers at internationally competitive prices; farmers will sell their crop to grain office at a reference price that will be announced soon.

Wheat consumption is expected to remain relatively stable. According to the office of statistics, wheat consumption per capita was about 200 kg per year in 2000, of which 67 percent was bread flour and semolina, 26 percent bread, and the rest was for other product of bread processing. Cereals products still remain staple food for population.

Algeria consumes about 2.4 million tons of semolina annually, for which it needs to process about 3.2 million tons of durum as raw material.

Despite the worldwide commodities price increase, the GOA assured that local sales prices for bread and flour will not change. In order to manage the increased prices, the GOA decided to continue the food price stabilization policy and allocated \$2.5 billion to support staple food prices.

The latter extended the sales price ceiling to semolina starting from 2008, and probably will do so to other staple commodities as well in the near future to protect household income.

The GOA has always put ceilings on bread and bread flour prices; (Decree of April 1996); bulk bread flour prices were fixed for sale at different levels of the distribution to food processing industries, local communities and retailers at 2080 A.D per quintal (\$32) and bakers at 2000 A.D (\$30) per quintal as well as consumers at 2180 A.D (\$33) per quintal. (Exchange rate: \$1=65.68 AD).

Packaged bread flour sales prices were set as follows;

Table: Packaged bread flour prices for sale (in Algerian dinars)

(Exchange rate: \$1 = 65.68 A.D)

| Packaging | Price for Sale to | Price for sale to | Price for sale to | |
|---------------------|-------------------|-------------------|-------------------|--|
| | Whole sellers | retailers | Consumers | |
| 01 kilogram 23.70 | | 25.70 | 27.50 | |
| 02 kilograms 45.40 | | 48.40 | 51.50 | |
| 05 kilograms | 113.50 | 123.50 | 133.50 | |
| 25 kilograms 550.00 | | 565.00 | 592.50 | |

According to the same decree above, bread price for sale was fixed at:

Regular bread - (250 grams); 7.50 A.D per unit - (500 grams): 15.00 A.D per unit

Improved bread- (250 grams): 8.50 A.D per unit

- (500 grams): 17.00 A.D per unit

These prices were calculated on office of grains wheat prices for sale basis; the latter was already supporting the prices for sale for durum and bread wheat to millers; office of Grains resell bread wheat to millers at 1285 A.D (\$19.5) per quintal and durum at 2280 A.D (\$35) per quintal. Differential between import prices and prices for sale to millers is supported by government.

Algeria remains one of the largest importers of wheat (4 million MT imported per year minimum) and of durum.

Algeria imported 4.6 million metric tons total wheat in CY 2007 (\$1.28 billion) of which 1.3 million MT was durum wheat and 3.3 million MT was bread wheat. Algeria imported about 40 percent (0.53 Million MT) of durum and 80 percent (2.6 Million MT) of bread wheat from Europe. For the same year Algeria imported about 71,000 MT of durum and 414,000 MT of bread wheat from the United States. (Source: Algerian customs).

U.S. market share for durum declined significantly over the past years. Bread wheat competition comes largely from Europe and Black Sea, and durum competition principally comes from Canada and France. Excellent durum yields and good quality crops, as well as proximity and good prices have enabled France to become the largest supplier of wheat to Algeria. Imports are mostly handled by the Algerian Office of Grains and some specialized bulk commodities importers.

Barley is usually imported exclusively in small shipments by private importers from Europe and Eastern Europe because of the proximity and low freight costs. Algeria imported 56,000 MT of barley in CY 2007 from France and Germany. Algeria imported exceptionally 24,000 MT from U.S. because of drought in 2006.

Algeria imported 2.28 million MT of corn in CY 2007. United States is Algeria's principal supplier of corn with 1.16 million MT, followed by Argentina (1.09 MT) and France (11,000 MT). Demand for US corn should remain strong despite high world prices. Animal feed manufactures expect maintain corn demand.

Some imports of DDG's occurred in early 2008. This is a new product for Algerian feed millers and importers that could grow further with technical assistance. Some trials are being done in some regions with expectations of broader use.

Demand for soybean meal comes mostly from the poultry feed manufacture sector. Since there is no crushing plant in Algeria, and with the feed manufacture expansion, demand is expected to stay high. Algeria imported about 655,000 MT (\$204 million) of soybean meal in 2007. Major suppliers are Argentina and the United States.

Algeria imports an average of 160,000 MT of pulses per year depending on world prices, mostly from Canada, China, Mexico, Argentina, and Turkey. These pulses are mostly beans, lentils, chickpeas and beans for seeding. U.S. market share for pulses still represents only 2 percent in CY 2007 (3,700 MT), mostly chickpeas, lentils and beans for seeding.

Table 1- Algeria Pulses imports in MT

| Origin | CY 2004 | CY 2005 | CY 2006 | CY 2007 |
|-----------|---------|---------|---------|---------|
| Canada | 55,000 | 96,356 | 61,049 | 76,573 |

| Total | 128,558 | 196,895 | 163,590 | 186,293 |

Algeria's imports of rice are very irregular. Private importers take opportunities when good prices occur to buy rice in small containers from different origin. Algeria imported 71,345 MT of rice in CY 2007, mostly from Pakistan, India, Thailand and Vietnam. Algeria has imported also 19 Mt from U.S. Last time Algeria imported rice from U.S. was in 2002, exceptionally, because of competitive prices in MY 2002, under GSM-102, 28,000 MT.

Table 2- Algeria Rice imports in MT:

| | CY 2006 | CY 2007 |
